

Esker Adds Online Archiving to FlyDoc

New version of FlyDoc places archiving at customers' fingertips

Madison, WI – October 23, 2007 - Esker, Inc., the leader in document process automation solutions, today announced the launch of the new version of FlyDoc, the company's on demand service that enables organizations to send invoices and other business documents via fax, postal mail, email and SMS directly from user desktops and enterprise applications. The new solution integrates online archiving, and adds a more user friendly interface.

The FlyDoc online archiving capabilities comply with regulations offering up to 11 years of accessible storage. The new solution also allows users the ability to automatically archive all documents sent with FlyDoc (mail, incoming and outgoing faxes) for a duration of 1 to 11 years at a flexible and competitive rate per page (FlyDoc automatically archives documents for free during the first 2 months). Additionally, users will be able to retrieve their files online at any time, thanks to a secure authentication procedure that includes profile and rights management, a powerful full-text search engine and full-text indexing. Finally, per customer request, Esker has developed a new user interface that lets the users feel more at ease.

Document conservation proposed by FlyDoc is supported on a double infrastructure: all data archived is mirrored in two secure infrastructures located in separate buildings. This innovative architecture ensures integrity of data and real-time access of documents to customers. As an option, customers can request a DVD copy of their archived documents with regular updates as required by the organization.

Launched at the beginning of 2006 in France and in the United States, FlyDoc has met large success and is used daily by more than 1,200 companies worldwide. The three Esker production centers located in France, USA, and Australia process more than 3 million pages each month.

FlyDoc is the only mail automation service that integrates directly with Microsoft Office 2007, and it also integrates in the form of Web Services for various market applications such as CEGID Business CRM.
